### INVESTMENT OBJECTIVE

The PCH Offshore Balanced Portfolio is suitable for investors who wish to utilize their offshore allowance via an actively managed allocation of assets between equity, bonds, property and cash. The portfolio offers exposure to a wide range of currencies and offshore markets and ideal for investors with a medium risk tolerance who wish to achieve long term capital growth.

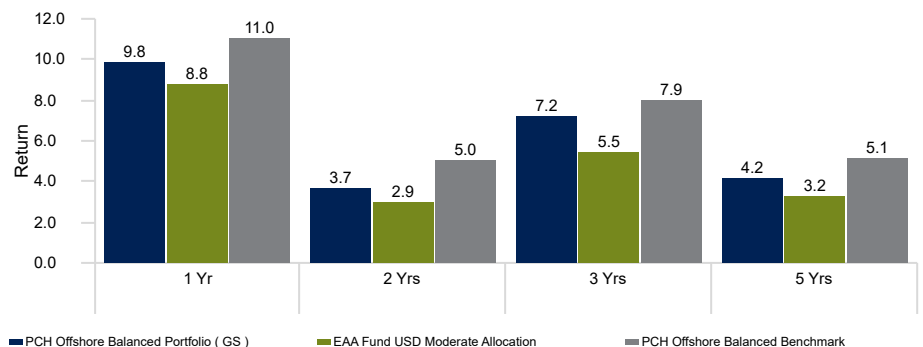

We invest in a combination of "best of breed" international unit trusts, blending the different skills and investment styles of fund managers. This approach has the ability to reduce volatility while achieving a growth rate in excess of inflation through different investment cycles.

The effective equity exposure ranges between 40% and 80% over time. Expect the portfolio to perform moderately during bull markets, but offer an element of protection during bear markets. You may experience relatively moderate levels of volatility and negative returns over the short term.
